Plants

Plant some seeds and record how they grow. (If you don't have any seeds try planting some apple pips.)

- You could keep a daily diary of how the seeds change over time.
- Once the seeds emerge from the soil can you measure their daily growth?
- Draw what they look like each week.
- Count how many leaves they have regularly, as this will change as they grow.
- *Copy the table below to record your results.*

Date	Height - cm	Number of leaves	Picture
